

Abstract : ART-Fi is a French deeptech company that develops innovative testing solutions for radiofrequency exposure assessment. ART-Fi also works on the development of applicative evolutions of its disruptive technology leading to a better evaluation of radiofrequency exposure impact in conjunction with a better understanding of this exposure.

ART-Fi participates actively in standardization committees with five experts at the European level (CENELEC) and at the international level (IEC).

This presentation presents D-PHASE, the innovative technology developed by ART-Fi and its applications on radiofrequency exposure assessment.
